## A New Radiation Oncology Site Opens at Mission Bay

Feb 1, 2015

UCSF Radiation Oncology's newest state-of-the-art complex is located at Mission Bay. It has been designed to ensure that our facilities fulfill UCSF's commitment to top-notch patient care. This new Department of Radiation Oncology site, built with emphasis on the patient's experience, is located in the Conway Medical Building, a facility focused on outpatient services for children, women and cancer patients.

Here at Mission Bay, you'll find the latest technology, including Brachytherapy (HDR) <sup>[1]</sup>, Stereotactic Body Radiation Therapy (SBRT) <sup>[2]</sup> and imaging, as well as space to accommodate tomorrow's innovations. All of this is housed in a structure that incorporates the highest standards of patient safety, energy efficiency, seismic readiness and environmental sustainability.
