University of California, San Francisco
Department of Radiation Oncology
Residency Training Program
Resident Rotation Objective for PGY-3 Residents
Alexander R. Gottschalk, M.D., Ph.D.

Patient Care

- Communicate effectively and demonstrate caring and respectful behavior when interacting with patients and their families
- Gather essential and accurate information about patients
  - Learn how to interpret PSA and free PSA
  - Learn how to interpret biopsy results
  - Learn how to read a diagnostic CT scan
  - Learn the basics of MRI and endorectal MRI/MRS of the prostate
  - Accurately stage patients based on the information available
- Develop the ability to make informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, up-to-date scientific evidence, and clinical judgment
  - Learn indications for bone scans and CT scans
  - Learn how to define PSA failures after radiation therapy
- Begin to develop and carry out patient management plans
  - Learn when hormonal therapy is appropriate in prostate cancer therapy
- Counsel and educate patients and their families
- Use information technology to support patient care decisions and patient education
- Provide health care services aimed at preventing health problems or maintaining health
- Work with health care professionals, including those from other disciplines, to provide patient-focused care
- Perform competently all medical and invasive procedures considered essential for radiation oncology including:
    a. selection of appropriate radiotherapeutic technique and modality for treatment of GU, thoracic and soft tissue tumors
    b. selection of immobilization technique, design of treatment portal, selection of beam modifier, common application of contrast material for simulation
    c. evaluation of radiotherapy treatment plan, dose and fractionation
    d. able to outline tumor and organs of interest on CT/MR
    e. evaluation port films and identify and correct any systematic error in the treatment process
    f. Intraoperative radiation therapy
    g. interstitial brachytherapy for GU malignancy
    h. stereotactic body radiotherapy

Medical Knowledge

- Demonstrate a sound understanding of the basic science background of oncology and apply this knowledge to the clinical care of patients with GU, thoracic and soft tissue malignancy
- Demonstrate the ability to use the scientific method and the deductive reasoning process
- Know and apply the basic and clinically supportive sciences which are appropriate to their discipline
  - natural history of disease
  - staging
  - indications for whole pelvic radiotherapy and/or hormonal therapy for prostate cancer
- Learn to identify and manage radiation therapy side effects and complication
- Learn the risks, benefits, side effects, long-term complications of, and alternatives to radiation therapy

Practice-Based Learning and Improvement

- Demonstrate the ability to use information technology and feedback to improve the practitioner's fund of knowledge and technical skills and, ultimately, provide a better care to patients.
- Keep a log of all patients being treated
- Identify scientific studies related to their patient's health problems
- Perform literature searches and read relevant material for new patient consultations
- Attend weekly teaching sessions given by myself
- Facilitate the learning of students and other health care professionals
- Attend GU, thoracic, and sarcoma tumor boards

Interpersonal Skills and Communication

- Communicate effectively with other healthcare professionals.
- Communicate with patients and their families in easily understood and culture-sensitive language.
- Work effectively as a member of a professional group.
- Consistently demonstrate sensitivity to patients from different cultures.
- Maintain comprehensive, timely, and legible medical records.

Professionalism

- Demonstrate respect, compassion, and integrity; a responsiveness to the needs of patients and society that supercedes self-interest; accountability to patients, society, and the profession; and a commitment to excellence and on-going professional development
- Demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices
- Demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities
- Work effectively as a member of a professional group and lead a team of residents
- Maintain comprehensive, timely, and legible medical records.

Systems-Based Practice

- Demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value. Residents are expected to:
    a. understand how their patient care and other professional practices affect other health care professionals, the health care organization, and the larger society and how these elements of the system affect their own practice
    b. practice cost-effective health care and resource allocation that does not compromise quality of care
    c. advocate for quality of patients care and assist patients in dealing with system complexities
    d. know how to partner with health care managers and health care providers to assess, coordinate, and improve health care and know how these activities can affect system performance

Resident Time Allocation for Attending Services

The resident signed to the Gottschalk rotation will work 5 days a week with Dr. Gottschalk.

How the Service Will Ensure One-On-One Teaching

Dr. Gottschalk will discuss and supply (if needed) pertinent papers related to each new patient seen. Evidence based radiation oncology will be discussed both at the time of consultation and at the time of treatment planning. The total time spent teaching the resident will be 1 hour or greater each week.

How the Service Will Ensure Contour and Plan Review

The resident on Dr. Gottschalk's service is responsible for contours on every simulation patient (except if resident is on vacation or at a meeting). When the resident has completed contours, s/he will alert Dr. Gottschalk and Dr. Gottschalk will review contours with the resident in person. When a plan is ready for review, Dr. Gottschalk will sit down with the resident to review the plan together. If the resident cannot be present at time of review, Dr. Gottschalk will discuss contours and review them with the resident at a later time.
